Lambus

Cet est une époque où le travail est peu
rétribué et l'industrie connaît une
forte croissance. Les secteurs de la
construction et de l'agriculture sont les plus actifs.
Ensuite, il y a un certain nombre de secteurs
qui connaissent des difficultés, comme la
minierie et l'industrie manufacturière.
Le niveau de vie est moyen, mais il y a
des différences entre les régions et les classes.
Les conditions de travail sont souvent difficiles,
mais les salaires sont élevés par rapport à d'autres pays.
L'industrie est très importante pour l'économie,
mais elle est également responsable de nombreux problèmes.
Le niveau d'éducation est moyen, mais il y a
des différences entre les régions et les classes.
